Environmental Approvals

Product Summary

Characteristic	Value	Unit
$I_{T(RMS)}$	1.25	A
V_{DRM} / V_{RRM}	800	V
I_{GT}	50 to 200	μA

Schematic Symbol

Product Description

The Sx02CSx offers excellent unidirectional switches for phase control applications such as heating and motor speed controls. Sensitive gate SCRs are easily triggered with microAmps of current as furnished by sense coils, proximity switches, and microprocessors.

Features

- RoHS compliant
- Glass-passivated junctions
- Voltage capability up to 800 V
- Surge capability up to 20 A

Applications

Typical applications are capacitive discharge systems for strobe lights and gas engine ignition. They also include controls for power tools, home/brown goods, and white goods appliances

Notes

V1 — 0 V to 10 V dc meter

V_{GT} — 0 V to 1 V dc meter

I_G — 0 mA to 1 mA dc milliammeter

R1 — 1 k potentiometer

To measure gate trigger voltage and current, raise gate voltage (V_{GT}) until meter reading V1 drops from 6 V to 1 V. Gate trigger voltage is the reading on V_{GT} just prior to V1 dropping. Gate trigger current I_{GT} can be computed from the relationship.

$$I_{GT} = I_G - V_{GT} / 1000 \text{ A}$$

where I_G is reading (in amperes) on meter just prior to V1 dropping.

2. I_{GT} may turn out to be a negative quantity (trigger current flows out from gate lead). If negative current occurs, I_{GT} value is not a valid reading. Remove 1 k resistor and use I_G as the more correct I_{GT} value. This will occur on 12 μA gate products.

6. Soldering Parameters

Parameter		Value
Reflow Condition		Pb-free Assembly
Pre-Heat	Temperature Min, $T_{S(\text{Min})}$	150 °C
	Temperature Max, $T_{S(\text{Max})}$	200 °C
	Time (Min to Max), t_s	60 to 180 s
Average Ramp-up Rate Liquidus Temp., T_L to peak		5 °C/s (Max)
$T_{S(\text{Max})}$ to T_L Ramp-up Rate		5 °C/s (Max)
Reflow	Temperature, T_L Liquidus	217 °C
	Time, t_s	60 to 150 s
Peak Temperature, T_P		260 °C (± 5 °C)
Time within 5 °C of Actual Peak Temperature, t_P		20 to 40 s
Ramp-down Rate		5 °C/s (Max)
Time 25 °C to Peak Temperature, T_P		8 minutes (Max)
Do Not Exceed		280 °C

Terminal Finish	100% Matte Tin-plated/ Pb-free Solder Dipped
Body Material	UL Recognized epoxy meeting Flammability Rating V-0
Lead Material	Copper Alloy

9. Design Considerations

Careful selection of the correct component for the application's operating parameters and environment will go a long way toward extending the operating life of the Thyristor. Good design practice should limit the maximum continuous current through the main terminals to 75% of the component rating. Other ways to ensure long life for a power discrete semiconductor are proper heat sinking and selection of voltage ratings for worst case conditions. Overheating, overvoltage (including dv/dt), and surge currents are the main killers of semiconductors. Correct mounting, soldering, and forming of the leads also help protect against component damage.
